Just specify 200 as the motor's voltage and the VFD's inverter section will accommodate the difference (240 in/200 out).. My machine manual calls for 208-220v 3 phase input, or 220v +-10% depending on which part of the manual you read.. It is, of course, possible to operate a 200 volt nameplate motor from a VFD with 240 in.
